FARMSEA 10

Liquid organic fertiliser with 10% seaweed for increased root mass.

Application rate:

100 litres/hectare
5 litres/500 sq. metres
Water ratio: 1:5

Can be used monthly throughout the year depending on weather conditions.

Farmsea 10 is made up of a formulation of Farmura Liquid and seaweed resulting in a feed that combines the complementary benefits of both the Farmura programme and seaweed for maximum impact.

Farmura Seaweed which is added to give a rate of 10 litres/hectare is important as an effective growth stimulator, encouraging strong rooting and aiding plant health during periods of stress caused by drought, frost or heavy use. At the level supplied there is no need to buy additional Seaweed where Farmsea 10 is used.

Benefits

- A balanced soil conditioner
- No need to buy additional Seaweed
- Increases nutrient availability to the plant
- Growth stimulator
- Encourages strong rooting
- Aids plant health during periods of drought, frost or heavy use
- Increases beneficial bacteria within the soil
- Farmura + Seaweed combination assists with sward density

For Best Results

- Use when the ground temperature is above 7°C.
- Avoid spraying in the heat of the day.
- In dry conditions water after application.

Features

- Formulation of Organic Liquid and seaweed to maximise performance
- Contains 70 analysed nutrients
- Full application of seaweed at 10 litres/hectare meaning the purchase of additional Seaweed is not necessary
- Low nitrogen 0.6%
- 70:30 soil leaf uptake

Where To Use

- Pre-seeding
- Re-seeding
- Fine turf
- Land reclamation
- Ecologically sensitive areas
- Turf laying
- General maintenance
