REDOX TECHNOLOGY
Complexed & Chelated Technology

WHY TurfRx Micro+ ?

TurfRx Micro+ is an L-amino acid micro-nutrient fertilizer. Redox chelation and complexing technology increases micro-nutrient availability. The specific ratio of each micro-nutrient will improve turf color and surface appearance of sports fields and playing surfaces.

PRODUCT USAGE

Practical rates of use: Apply TurfRx Micro+ at 5 – 10L / Ha in 400 – 800L of water.

The unique Redox chelation and complexing technologies used in the TurfRx Micro+ manufacturing processes ensure that the micro-nutrients are incapable of becoming locked up in the drum, in the spray tank or in the soil and therefore result in their efficient supply to the plant. It is therefore an extremely efficient micro-nutrient package that is particularly useful where inert rootzones exist or where certain deficiencies are known to prevail.

HANDLING GUIDELINES

PRE-MIXING

Pre-mixing is considered a best practice when sprayer agitation is not optimum. Proper hydration is essential for all applications. Recirculate or agitate while adding material.

ONCE THE MATERIAL IS ADDED TO WATER, CONSTANT AGITATION IS REQUIRED.

COMPATIBILITY

Always jar test first.

Redox products are compatible with other Redox products when following product handling guidelines.

Use caution with reactive materials.

Avoid extreme shifts in tank pH. When utilizing Redox materials that acidify, check tank pH prior to adding buffers.

TANK MIXING/INJECTION

Use of an anti-foaming agent is recommended. Fill the tank 50% full with water and initiate tank agitation prior to adding materials.

Don't add material too quickly—this allows for more thorough hydration.

The use of inductor assemblies is encouraged.

Recirculate or agitate while adding material.

ONCE THE MATERIAL IS ADDED TO WATER, CONSTANT AGITATION IS REQUIRED.

Rinse after use.

REFER TO PRODUCT HANDLING GUIDELINES FOR ADDITIONAL MIXING INSTRUCTIONS.
