WHY **TurfRx NatureCur** ?

TurfRx NatureCur is a botanical extract product that contains 5% potassium. **TurfRx NatureCur** contains proprietary soluble carbon compounds that improve antioxidant production and stimulate root growth & metabolism. **TurfRx NatureCur** reduces abiotic stress by increasing root quality and quantity, resulting in improved soil health.

PRODUCT USAGE

Practical rates of use:	Apply TurfRx NatureCur at 5 – 10L / Ha in 400 – 800L of water.
-------------------------	--

TurfRx NatureCur can be applied at up to 20L / Ha per month where plant parasitic nematode issues are acute, however, the “little and often” approach may be more successful as a consistent supply of the botanical extracts to the rhizosphere and to the vascular system of the grass plant will be more likely to retain the necessary level of unpalatability required.

TurfRx NatureCur optimises root quality and quantity; both being essential for water and nutrient uptake. By increasing the relative strength and viability of root metabolism, the foundation for healthy turf growth can be achieved. The unique Redox complexing process is used in the production of this product that utilises a blend of botanical extracts in its formulation. Applications of TurfRx NatureCur, made in a programmed approach, will also result in an improvement in the symbiotic relationships within the rhizosphere.

HANDLING GUIDELINES

PRE-MIXING

Pre-mixing is considered a best practice when sprayer agitation is not optimum. Proper hydration is essential for all applications. Recirculate or agitate while adding material.

ONCE THE MATERIAL IS ADDED TO WATER, CONSTANT AGITATION IS REQUIRED.

COMPATABILITY

Always jar test first.

Redox products are compatible with other Redox products when following product handling guidelines.

Use caution with reactive materials. For example, phosphorus and calcium.

Avoid extreme shifts in tank pH. When utilizing Redox materials that acidify, check tank pH prior to adding buffers.

TANK MIXING/FERTIGATION

Use of an anti-foaming agent is recommended. Fill the tank 50% full with water and initiate tank agitation prior to adding materials.

Don't add material too quickly—this allows for more thorough hydration.

The use of inductor assemblies is encouraged.

Recirculate or agitate while adding material.

ONCE THE MATERIAL IS ADDED TO WATER, CONSTANT AGITATION IS REQUIRED.

Rinse after use.

REFER TO PRODUCT HANDLING GUIDELINES FOR ADDITIONAL MIXING INSTRUCTIONS.
