Golf Course Manager - Romford GC

### GOLF COURSE MANAGER:

Antony Kirwan

### ACCOUNT MANAGER

Alan Pierce

### TYPE OF COURSE / TURF:

Parkland poa/bent composition

### ISSUES

- Sward density
- Disease scarring

### PRODUCTS USED

#### OxyCal

- Rate: 500g/Ha
- Frequency: After renovations

#### NatureCur

- Rate: 5L/Ha
- Frequency: After renovations

#### Si

- Rate: 5L/Ha
- Frequency: Bi-monthly

### APPROACH

We were looking for a way to speed up recovery following our course maintenance week. I walked a few holes with Alan Pierce during his visit and he mentioned that mixing Redox OxyCal and NatureCur was a good option to achieve our goal of speeding up recovery.

We applied 4.5Kg of OxyCal mixed with 5L of NatureCur immediately following renovations and the results were perfect.

Before

After

### RESULTS

We were impressed with how quickly we were able to get our putting surfaces back to a high standard following a fairly intensive maintenance operation. The sward density appeared to be improved and the plant looked healthy. As a result of the success from this mix we are now using Redox Si on an ongoing basis to help with abiotic stresses and surface performance.
