

# Aquatrols® DISPATCH SPRAYABLE

## A SOIL SURFACTANT DESIGNED FOR ALL SPORTS TURF AREAS THAT PUTS YOUR WATER TO WORK

Whether your sports turf is under constant water use restrictions or you have plenty of water available, the real challenge is getting water to go where you need it. The amount of water you apply doesn't matter if your turf can't access it.

Dispatch Sprayable increases the infiltration and penetration of irrigation or rainfall, making it more readily available for plant uptake. Because Dispatch Sprayable delivers water more efficiently into the soil, photosynthesis and other turf metabolic functions can be maintained with less water. The result is increased turf performance even under heat and moisture stress, and more dependable plant growth and playability.

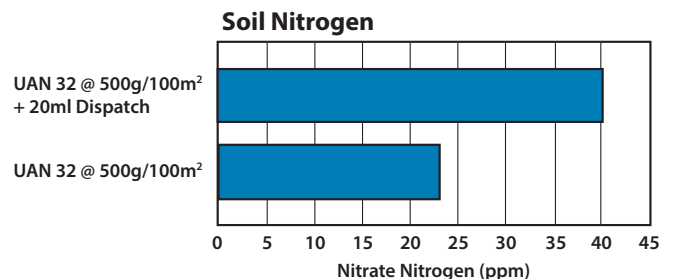

Dispatch Sprayable is specifically engineered to enhance water penetration "wall-to-wall." This patented, synergistic blend of block copolymer and alkyl polyglycoside surfactants gives you better water penetration, improving irrigation efficiency without great expense or major capital inputs.

### GROWING BENEFITS

#### Dispatch Sprayable Improves Nitrogen Efficiency

Improving the way water moves through your soil will have a number of benefits this autumn and beyond.

- Ensures quick, uniform penetration of any snow melt and/or precipitation that occurs
- Improves soil moisture levels as the ground thaws  
Maximises photosynthesis and root growth coming out of winter
- Reduces water usage by 25-50% without sacrificing turf quality
- Reduces surface run-off by as much as 19.2% on slopes!  
This reduces the loss of costly water-soluble chemicals as well as water!
- Promotes consistent playing surfaces for better playability
- Increases overall plant health for better disease tolerance

Dispatch Sprayable distributes water and nutrients more uniformly throughout the rootzone, improving the efficiency of fertilizers and other applied inputs.
