

10 litres • 210 litres

A root and foliar feed that builds and strengthens cell walls in roots, stems and leaves.

Water Ratio: 1:5 minimum

Calcium plays many roles in the overall health of both the plant and the soil — perhaps more than any other nutrient. It has a beneficial effect on the makeup of the plant, strengthening its physical structure and helping protect it from disease. It assists with root and leaf development and makes nutrients and micro-nutrients more available. Calcium Plus is both a root and a foliar feed. Correct levels of calcium also help the nitrogen being applied work more efficiently.

Calcium Plus offers you a fast, easy way to improve the health and appearance of your fine turf areas. There are many sources of calcium available; however, Calcium Plus is a root and foliar feed, which ensures that the calcium is put where it is needed most — in the ground, and, more importantly, into the cell wall of the plant. High levels of calcium in the cell of the plant make the cell wall rigid, which strengthens the turf against disease.

Benefits

- Builds and strengthens cell walls in stems, roots and leaves
- Contains an advanced synergistic blend of nutrients
- Improves photosynthesis of the plant
- Will not change the soil's pH
- Contains Amine Nitrogen preventing a flush of growth
- Fast, effective plant absorption following application
- Strengthens cell walls in stems, roots and leaves
- Improves soil texture and makes nutrients more available
- Spoon feed or apply as per application guide
- Easy, accurate spray application
- Spray and play
- 70:30 leaf uptake

Application Guide

	10	20	30	50
Litres per Hectare	10	20	30	50
Kgs per Hectare Calcium	0.90	1.80	2.70	4.50
Kgs per Hectare Nitrogen	1.90	3.90	5.80	9.70
